Remarks:

SEMINARS - 1|10 □ week 16|27

At the end of each seminar student has to solve 4÷5 problems directly correlated with the topic of the seminar. The solution of problems will be evaluated using (0|10) point scale.

LAB - 1|2 □ week 16|17

First and second meetings are treated as an introduction to the laboratory. Students will be split into 2-person teams and will complete one exercise (Data acquisition and evaluation) for training. Moreover, detailed schedule of the laboratory (Lab 3|10) for each team will be announced during 2nd laboratory.

LAB - 3|10 □ week 18|27

Each team has to complete 8 exercises from the list given below (1 per week).

LAB	Description
3.	Ultrasonic imaging.
4.	Principles of magneto-therapy.
5.	Electrocardiography.
6.	Applanation tonometry
7.	Digital subtraction angiography.
8.	Strength of bone.
9.	Model of the respiratory system.
10.	Model of the cardiovascular system.
11.	Haemodialysis, blood purification system.
12.	Electro-therapy.

To pass each exercise student has to complete himself a simple experiment and has to prepare a report containing results, calculations, discussion of the results and final conclusions. The report will be evaluated using (0|10) point scale.

Seminar/Laboratory credit □ 60% of maximal number of points (60/48 - sem/lab)
