The topics of particular seminars of the course:

1. Previous contact with somatically ill patients – sharing personal experience.
2. Functioning of a small group – the physician in a team.
3. Observation of behavior and appearance – the very first impressions of a patient.
4. Joining with the patient and taking a medical history.
5. Practicing the skills to ask about emotions.
6. Using information to ask further question – following the cue.

7. Understanding the style and strategies of coping with illness.
8. Recognizing the social context of the ill person.
9. Genogram as a method of collecting family information.
10. Practicing the contact with the family of the patient.
11. Practicing emotionally difficult tasks (e.g. communication of a very bad news)
12. Being in touch with someone's own emotional reactions and their effect on behaviour.
13. Problem of transference and countertransference – how it can be recognize.
14. The difficult patient – how to understand and cope with the problem.
15. Summary, reflections and credit.

Please note that the course is assessed on the basis of personal activity and engagement as well as attendance – a maximum number of **2 absences are allowed**,
